

iCafe Cloud Management

BUSINESS OWNER & EXECUTIVE GUIDE

Strategic Governance, Revenue Maximization, Staff Audits & Multi-Branch Control

EXECUTIVE VALUE PROPOSITION & CAPABILITIES

- Real-Time Revenue Audits: Live oversight of gross receipts, cash top-ups, POS snack sales & shift variances.
- Anywhere Cloud Admin: Manage tariffs, staff, and monitor floor matrix from mobile, tablet, or home PC.
- Leakage Prevention: Cash drawer reconciliation forces cashiers to account for every centavo at shift end.
- Multi-Branch Expansion: Single dashboard support for multi-store chains with isolated branch billing.
- Offline Durability: Zero business disruption when internet drops; automatic LAN synchronization upon reconnect.

FINANCIALS & REVENUE CONTROL

- Hourly Tariffs: Regular, VIP, and promotional rate plans.
- Cashier Shift Audits: Eliminating cash drawer discrepancies.
- GCash Integration: Seamless digital QR customer top-ups.
- Unearned Wallet vs Recognized Session Revenue.
- Food & Beverage POS: High-margin snack & beverage tracking.
- Automated EOD (End-of-Day) financial accounting.

SECURITY, FLEET & DISASTER RESILIENCE

- Multi-Branch & Station Fleet layout governance.
- Segregation of Duties: Owner vs Manager vs Cashier.
- Master PIN Security: Restricting kiosk escape hatches.
- Zero-Downtime ISP Outage & Crash Recovery Playbook.
- Deep Freeze & Diskless (iCafe8/CCBoot) best practices.
- Pre-Launch Owner Checklist before opening doors.

EXECUTIVE SUMMARY & SYSTEM ATTRIBUTES

Target Audience: Cybercafe Owners, Franchise Operators & General ManagersSupported Tiers: Bronze (1-15 PCs), Silver (16-30), Gold (31-60), Ultra (61-100)
Platform: Web Cloud Admin (Vercel) + Desktop Console + Hybrid Edge Node Currency & Regionalization: Philippine Peso (PHP PHP) · Asia/Manila (PH)
Security Level: Cryptographic Timing-Safe Master PIN, Argon2 & Supabase RLSupport & Observability: Central Error Fingerprinting & Auto-Backups

1. Hourly Tariffs, Rate Plans & Dynamic Pricing

Pricing Strategy

Rate Plan Type	Business Purpose	Billing Calculation & Behavior	Strategy Tier
Standard Hourly	Regular walk-in gaming and internet rate.	Hourly rate charged in fractional seconds. Min spend applies.	Default
Member Discount Rate	Preferred lower rate for registered members.	Incentivizes membership sign-up and wallet balance deposits.	Loyalty
VIP Gaming Zone	Premium rate for high-spec RTX / 240Hz PCs.	Assigned to specific PC groups in Floor Matrix.	Premium
Night Package / Promos	Bulk hours bundle (e.g. PHP 100 for 6 hours).	Non-refundable upfront block time during off-peak hours.	Promotion
Custom Promo Vouchers	Redeemable alphanumeric code (XXXX-XXXX).	Grants bonus wallet credit or bonus time via Voucher modal.	Marketing

2. Cashier Shift Reconciliation & Anti-Theft

Cash Drawer Audits

Shift Stage	Operational Action & Verification	System Financial Protection
Shift Start Float	Cashier inputs beginning cash drawer float (e.g. PHP 1,000 in small change).	Float is recorded separately from operational revenue.
Real-Time Tally	System tracks cash top-ups, walk-in guest sessions, and POS food/drink sales.	Logged to SQLite and Supabase transaction ledgers.
Shift Handover	At shift end, cashier counts physical cash and inputs total in Shift modal.	System automatically computes Over / Short variance.
Audit Discrepancy	Variances are flagged in red. Cashier cannot edit historical transactions.	Permanently archived in Shift Management report for Owner review.

Accounting Principle: Recognized Revenue vs. Wallet Liabilities

- Customer Wallet Balance (Prepaid Time): When a member deposits PHP 500, this is recorded as a liability in branch_wallet_ledger.
- Recognized Earnings: Revenue is officially booked as gross earnings ONLY when time is consumed on a PC or snacks are purchased.
- The Overview & Analytics dashboard separates Daily Gross from Unspent Member Balances to provide 100% GAAP accounting accuracy.

1. MULTI-BRANCH OPERATIONS & SUBSCRIPTION TIERS

Enterprise Growth

Package Tier	Station Quota	Target Environment & Scale	Standard Base
Bronze Tier	1 – 15 PCs	Designed for single-store esports hubs or boutique gaming cafes.	PHP 1,499 / mo
Silver Tier	16 – 30 PCs	Standard tier for medium-sized computer shops with active member bases.	PHP 2,499 / mo
Gold Tier	31 – 60 PCs	High-density gaming arenas, multi-floor layouts, and tournament setups.	PHP 3,999 / mo
Ultra Tier	60+ PCs	Enterprise multi-branch chains with custom station capacities and priority support.	Custom Quote

2. PC FLEET MANAGEMENT, PAIRING & FLOOR MATRIX

Hardware Control

Fleet Capability	Operational Procedure	Executive Benefit & Safety
Visual Floor Matrix	Customize grid layout to mirror your physical room layout (Regular, VIP, Streaming).	Realtime occupancy, active player name, time remaining, and hardware status.
One-Time Pairing (OTP)	Generate an 8-character OTP (XXXX-XXXX) in Cloud Admin -> Clients -> Pair Station.	Client PC verifies code against Supabase and binds permanently to branch.
Remote Power Controls	Bulk or individual PC commands: Wake-on-LAN, Remote Reboot, Remote Shutdown.	Allows closing all stations simultaneously at end-of-business with 1 click.
Station Lock / Maintenance	Mark PCs into Maintenance or Reserved state to prevent customer login.	Useful for cleaning, hardware upgrades, or private tournament bookings.

STATION CAP ENFORCEMENT & INTEGRITY

- Organization Station Cap: Enforced at the Supabase database level via race-safe PostgreSQL triggers.
- Over-enrollment protection: Client stations cannot be paired beyond your subscribed quota without upgrading.
- Unpairing & Hardware Replacement: If a PC motherboard dies, simply unpair the station in Cloud Admin to free up its quota slot.

1. ROLE HIERARCHY & SEGREGATION OF DUTIES

Security Governance

Role Tier	Permitted Scope	Access Rights & Security Restrictions
Owner	<i>All Branches</i>	Full financial reports, bank/GCash setup, subscription billing, staff hiring/firing, developer quotes.
Branch Admin	<i>Single Branch</i>	Branch PC layout, rate plans, inventory management, inviting local cashiers, day-end reviews.
Shift Manager	<i>Assigned Shift</i>	Cashier shift supervision, overriding locked PCs, verifying drawer cash, voiding erroneous orders.
Front-Desk Cashier	<i>Terminal POS</i>	Clock-in/out, top-ups, guest time, snack orders, session start/end. NO access to settings or tariffs.

2. PREVENTING COMMON CYBERCAFE FRAUD & LEAKAGES

Audit Protections

Vulnerability	Cashier / Customer Threat	iCafe Built-in Countermeasure
Unrecorded Top-ups	Cashier receives cash from customer but does not encode it.	Session cannot start without balance; kiosk remains locked until payment is recorded.
Fake Over/Short Reports	Cashier claims drawer was short due to customer disputes.	Shift report logs exact timestamps of every transaction; receipts are immutable.
Customer Kiosk Escape	Customer attempts to close client app to play for free.	Win32 low-level hook blocks Alt+Tab, Alt+F4, and Win key. Only Master PIN exits.
Unauthorized Discounts	Cashier applies custom discounts for friends.	Hourly rates are strictly bound to server rate plans; cashiers cannot modify tariffs.

EXECUTIVE RULE: MASTER PIN CUSTODY

- The Station Setup Master PIN (Default: 062321) must NEVER be shared with regular cashiers.
- Master PIN grants total control to quit kiosk, unpair stations, and override server connection settings.
- Only the Owner and trusted Senior Managers should possess the Master PIN. Rotate periodically via AEZAKMI_STATION_SETUP_MASTER_PIN.

1. BUSINESS CONTINUITY & DISASTER RECOVERY PLAYBOOK

Crisis Management

Crisis Event	Automated Architectural Safety Net	Owner / Staff Recovery Protocol
Internet Service Outage (ISP Drop)	Switching is 100% automated. Customer stations immediately fall back to local LAN Cafe Edge (port 3000). Gamers experience zero disruption.	Cashier continues selling time and snacks locally. Backlog syncs to Cloud when WAN returns.
Sudden Power Blink / Trip	Remaining seconds are checkpointed into SQLite and Cloud database upon unexpected interruption.	Customer reboots PC, signs back in, and remaining minutes are restored automatically.
Server Hardware Crash	Automated verified database backups execute every 6 hours, retaining 28 rolling snapshots in ./data/backups.	Restore latest snapshot via: <code>node backend/scripts/restore-backup.mjs <backup-file></code> .

2. OWNER PRE-LAUNCH OPERATIONAL CHECKLIST

10-Point Readiness Verification

#	Operational Checkpoint	Action / Requirement	Sign-Off
1	Master PIN Changed	Default 062321 replaced with confidential 6-digit owner PIN.	[] Verified
2	Static Server LAN IP	Cashier/Server PC assigned static IP (e.g. 192.168.1.100).	[] Verified
3	Firewall Port 3000 Open	TCP port 3000 allowed inbound for LAN fallback communication.	[] Verified
4	Rate Plans Configured	Hourly rates, member tariffs, and night promo packages set.	[] Verified
5	Initial Cashier Invited	Staff account created; temporary password delivered & changed.	[] Verified
6	All Client PCs Paired	Each PC bound via 8-digit OTP (XXXX-XXXX) in Floor Matrix.	[] Verified
7	Deep Freeze Unfrozen Partition	Station credential folder (.aezakmi-customer) kept persistent.	[] Verified
8	Windows Defender Exclusions	Client & server install folders whitelisted against false flags.	[] Verified
9	GCash QR Uploaded	Digital payment QR code uploaded in Settings -> Payments.	[] Verified
10	Automated Backup Verified	Verified backups folder (./data/backups) is creating snapshots.	[] Verified

EXECUTIVE SUMMARY

- The iCafe system is designed to give you peace of mind, operational transparency, and maximum profitability.
- Monitor your business anytime, anywhere at your cloud admin URL: <https://icafe-aezakmi.vercel.app>
- For system assistance or multi-branch upgrades, contact developer platform support.
